

EASTERN UNIVERSITY, SRI LANKA

SECOND YEAR FIRST SEMESTER SPECIAL DEGREE EXAMINATION IN ECONOMICS
2013/2014 (2012/13 Batch)

ECS 2142 – ENGLISH FOR ECONOMICS- 1

Time: 03hours

Index No :

Instructions to the candidates:

1. Duration: Three (03) Hours
2. Answer all the questions on this paper itself.
3. Marks will be deducted for wrong spellings and grammar.
4. Read each question carefully and answer them.
5. This paper consists of thirteen (13) pages.
6. Write your Index Number clearly on the space given.

For Examiner's use only

Question Number	Maximum Marks	Marks Obtained
1	25
2	10
3	15
4	15
5	15
6	20
	-----	-----
	100	=====

Q1: Read the following text and answer the questions that follow:

A).....

ANGUS DEATON has been named the winner of this year's Sveriges Riksbank prize in economic sciences in memory of Alfred Nobel. Mr. Deaton is a Britain-born economist (Scotland, to be specific), who earned his PhD in economics at Cambridge University before moving to America; he is now at Princeton University. Mr. Deaton is best known for his work on consumption theory, welfare and inequality.

B).....

The committee awarded him the honour “for his analysis of consumption, poverty, and welfare”. His work “linking detailed individual choices and aggregate outcomes” was praised for having helped to “transform the fields of microeconomics, macroeconomics, and development economics”. According to the Royal Swedish Academy of Sciences’ website, his work has helped to provide answers for three big questions in economics:

“How do consumers distribute their spending among different goods? Answering this question is not only necessary for explaining and forecasting actual consumption patterns, but also crucial in evaluating how policy reforms, like changes in consumption taxes, affect the welfare of different groups. In his early work around 1980, Deaton developed the Almost Ideal Demand System—a flexible, yet simple, way of estimating how the demand for each good depends on the prices of all goods and on individual incomes. His approach and its later modifications are now standard tools, both in academia and in practical policy evaluation.

How much of society's income is spent and how much is saved? To explain capital formation and the magnitudes of business cycles, it is necessary to understand the interplay between income and consumption over time. In a few papers around 1990, Deaton showed that the prevailing consumption theory could not explain the actual relationships if the starting point was aggregate income and consumption. Instead, one should sum up how individuals adapt their own consumption to their individual income, which fluctuates in a very different way to aggregate income. This research clearly demonstrated why the analysis of individual data is key to

untangling the patterns we see in aggregate data, an approach that has since become widely adopted in modern macroeconomics.

How do we best measure and analyze welfare and poverty? In his more recent research, Deaton highlights how reliable measures of individual household consumption levels can be used to discern mechanisms behind economic development. His research has uncovered important pitfalls when comparing the extent of poverty across time and place. It has also exemplified how the clever use of household data may shed light on such issues as the relationships between income and calorie intake, and the extent of gender discrimination within the family. Deaton's focus on household surveys has helped transform development economics from a theoretical field based on aggregate data to an empirical field based on detailed individual data."

C)

The award comes at a time when there is rising academic and popular interest in the study of inequality. Several economists, including Anthony Atkinson of the London School of Economics (who was among the leading contenders for a Nobel prize this year) and Thomas Piketty of the Paris School of Economics (who is still a bit too young for one), have published widely-read volumes on the subject over the last two years. Mr. Deaton published his, *The Great Escape: Health, Wealth, and the Origins of Inequality*, in 2013. In it, he argued that while most people in the world have gained in terms of health and well-being from GDP growth over the last few decades, there are many groups that have missed out, particularly if on measures beyond the most commonly examined.

Although the book has not generated as many newspaper column inches or as much public recognition as Mr. Piketty's blockbuster, *Capital in the 21st Century*, the book's main conclusions have gone down well in the scholarly community. As we wrote more than a decade ago: "Mr. Deaton is perhaps the only economist at work in this area who is acknowledged by both sides both as authoritative and as having no ideological axe to grind." That may well have been why he was awarded the prize earlier today.

1. Fill in the subheading with suitable words of your choice

A).....

B).....

C).....

Marks: 06

2. Give the Summary of the text in 30—40 words

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....
.....

Marks: 05

3. Give a suitable title to the Text:

.....

Marks: 01

4. Where did Angus Deton earn his PhD?

.....

Marks: 01

5. What is Angus Deton, according to the text better known for?

.....

.....

Marks: 01

6. Why did the Nobel Committee award him the Nobel Prize?

.....
.....
.....

Marks: 03

7. According to the Royal Swedish Academy of Sciences, as mentioned in the text, what the three questions that are provided with answers based on Deton's study?

.....
.....
.....
.....

Marks: 03

8. What did Deton publish in 2013 and what was his main argument in it?

.....
.....
.....

Marks: 03

9. Who are the two of Deton's contemporary economists whose names are mentioned in text?

.....
.....

Marks: 02

Q2. Use the words given below to fill in the missing information:

leading, Megapolis, declared, Speaking, individual, congestion, sub-project, transport, project, commence)

Sri Lanka's Western Province Megapolis.....(1) which will be merging Colombo, Gampaha and Kalutara districts, is to.....(2) on January 29, 2016. The project is expected to be completed within fifteen years at a cost of Rs. 40 billion.....(3) on the lines of the project, the Minister of Megapolis and Western Development Patali Champika Ranawaka stated that the urbanisation of cities has left Sri Lanka looking for answers to problems such as traffic.....(4), garbage issues, slums, and environmental pollution. The minister brought to light the target of raising the per capita income of the country from \$4,000 US to \$12,000 US by the year 2030.

the project is aimed at building an (5) equipped with economic success, social quality, environment conservation and happiness. Furthermore, 150..... (6) to be undertaken through ten themes. Among them are two special projects which will design the Port City and Aviation City.

furthermore, the areas near Colombo Fort will be called the Commercial City while the areas between Battaramulla and Kotte will be (7) an Administrative City. The areas falling under the Homagama and Malabe city limits will be named the Technical City. The main transport hub will be built in Colombo Fort while new(8) hubs will be built along a number of entry points.....(9) to Colombo. Housing projects, industrial zones as well as green zones and agricultural zones are also established as part of the Western Province (10) Project.
