Abstract	III
List of table	IV
List of figures	V
Abbreviations	VI

Chapter – 1 Introduction.

1.1. Background of the study	01
1.2. Problem statement	03
1.3. Research questions	03
1.4. Objectives of the study	03
1.5. Scope and limitation	04
1.6. Assumption	04

Chapter -2 Literature Review

2.1. Introduction	05
2.2. Performance measurement and management	05
2.2.1. Relationship between performance measurement and Performance management	06
2.2.2. Performance measure.	07
2.2.3. Performance measurement system	08
2.2.3.1. Traditional performance measurement system	08
2.2.3.2. Multi-dimensional performance measurement system	09
2.2.4. Importance of performance measurement	12
2.2.5. Limitations of multi-dimensional performance measurement system	12
2.3. Performance measurement in the global construction industry	13
2.4. Performance measurement in Sri Lankan organizations	14

2.5 Summary	15
Chapter – 3 Conceptualization Framework	
3.1. Introduction.	16
3.2. Conceptualization framework	16
3.2.1 Financial Perspective	16
3.2.2 Customer Perspective	17
3.2.3 Internal Business Process Perspective	18
3.2.4 Innovation, Learning and Growth Perspective	18
3.3 Operationalization	19
3.4 Summary	20
Chapter – 4 RESEARCH METHODOLOGY	
4.1. Introduction	21
4.2. Research sample	21
4.2.1 The Choice of the Sample	21
4.2.2 Random Sampling	21
4.3 Data collection techniques	22
4.3.1 Primary Data	22
4.3.2 Secondary Data	23
4.4 Structure of Questionnaire	23
4.4.1. Personal Information	24
4.4.2. Research Information	24
4.5 Data analysis	24
4.6 Data evaluation	25
4.7 Summary	26

2.5 Summary	15
-------------	----

Chapter – 3 Conceptualization Framework

3.1. Introduction.	16
3.2. Conceptualization framework	16
3.2.1 Financial Perspective	16
3.2.2 Customer Perspective	17
3.2.3 Internal Business Process Perspective	18
3.2.4 Innovation, Learning and Growth Perspective	18
3.3 Operationalization	19
3.4 Summary	20

Chapter – 4 RESEARCH METHODOLOGY

4.1. Introduction	21
4.2. Research sample	21
4.2.1 The Choice of the Sample	21
4.2.2 Random Sampling	21
4.3 Data collection techniques	22
4.3.1 Primary Data	22
4.3.2 Secondary Data	23
4.4 Structure of Questionnaire	23
4.4.1. Personal Information	24
4.4.2. Research Information	24
4.5 Data analysis	24
4.6 Data evaluation	25
4.7 Summary	26

Chapter – 05 Data Presentation and analysis

5.1. Introduction.	27
5.2. Personal information	27
5.3. Research information	31
5.4. Data presentation of main variable	40
5.5. All variables at same time	43
5.6. Summary	43

Chapter – 6 Discussions

6.1. Introduction.	44
6.2. Variables.	44
6.3. Summary	51

Chapter 7 Conclusion and recommendations

7.1. Introduction.	52
7.2. Recommendations and conclusions	52
7.3. Summary	56

Appendix

Appendix – 1 The Questionnaire used for Study

ABSTRACT

The study is set out to highlight the factors affecting the performance of construction on Construction projects within Lagos State. This will assist clients in the choice of the right Contractors to select for realizing their projects. A descriptive research survey was used and Simple random sampling technique was adopted for the study. From the results obtained, it was found that the most suitable performance yardsticks to ascertain whether a contractor has performed adequately are the quality of work, the delivery of the project on time, the productivity rate of the contractor and project completion within the estimated budget. It was discovered that significant factors affecting performance as categorized into ten groups are site conditions, complexity of project, subcontractors experience, collaboration of project participants, experience of workers, quality control of materials amongst others. Excellent contractor performance would lead to reduced construction cost, improved quality of work and reduction in waste among others.

The research objectives of this research study are to measure the satisfactory level of construction project, Perfect evaluation system for construction in EUSL and Reason for bad performance of construction projects. Construction projects are single entities which are the output of the construction industry. As these projects are identical for each other and having a long period as the life of the construction with involving a huge cost, consideration on performance has become a vital aspect to remain competitive in the long-run. However the traditional view of performance measurement highly relies on financial and accounting data which gives only the past performance. It has been identified that the performances have not been measured quantitatively and qualitatively in the Sri Lankan construction industry. Literature reveals that Balanced Scorecard (BSC) used in manufacturing industry as well as construction industry as an appropriate performance measurement system to overcome the limitations in traditional paradigms. Thus the gap of implementing BSC for construction project performance can be identified.

Keywords: Contractors, Performance, Construction projects, Balance Scorecard.
